

ABSTRACT OF THE INVENTION

An extendable drinking utensil including an outer casing, inner casing(s), a lid if desired, a handle if desired, a sealing gasket if desired, which all contribute to the enhancement of liquid, or formulation, storage and/or consumption. The extendable drinking transforms from a normal drinking utensil into a larger drinking utensil capable of holding more and displaying more. This invention allows individuals the convenience of turning their everyday coffee mug into a larger container or pitcher. This invention allows advertisers the ability of enhancing positive brand exposure. This invention allows individuals to show off their favorite team in a new and revolutionary way. This invention allows retailers to offer something completely unique to their customers while also conserving precious shelf space normally used for containers with similar storage capacity. This invention also allows the end user the luxury of storing a container with large holding capacity into a small cupboard or onto a small shelf.
